COMPANY

BRIXIA PLAST was founded in 2003 from the merge of three companies working in the plastics industry as OEM's suppliers; joining these forces and experiences, **BRIXIA PLAST** is now a leader in the design and production of all the components of the plasticizing unit necessary for the transformation of plastic polymers, such as screws, barrels, screw tips and related mechanical accessories.

CERTIFIED COMPANY

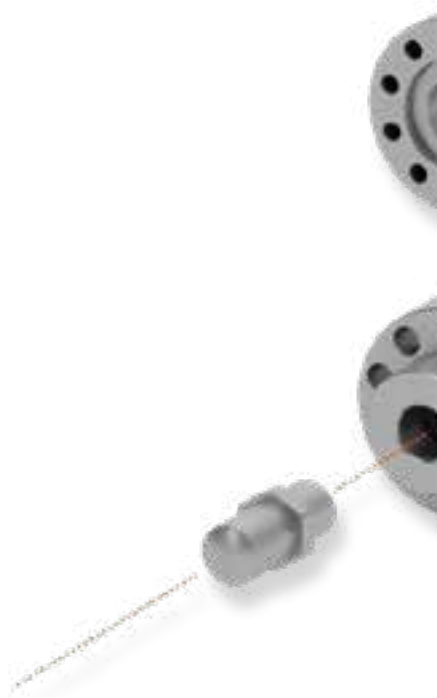

Our natural **predisposition for improvement**, our optimized management procedures and integrated quality control systems have allowed us to obtain **ISO9001 certification**.

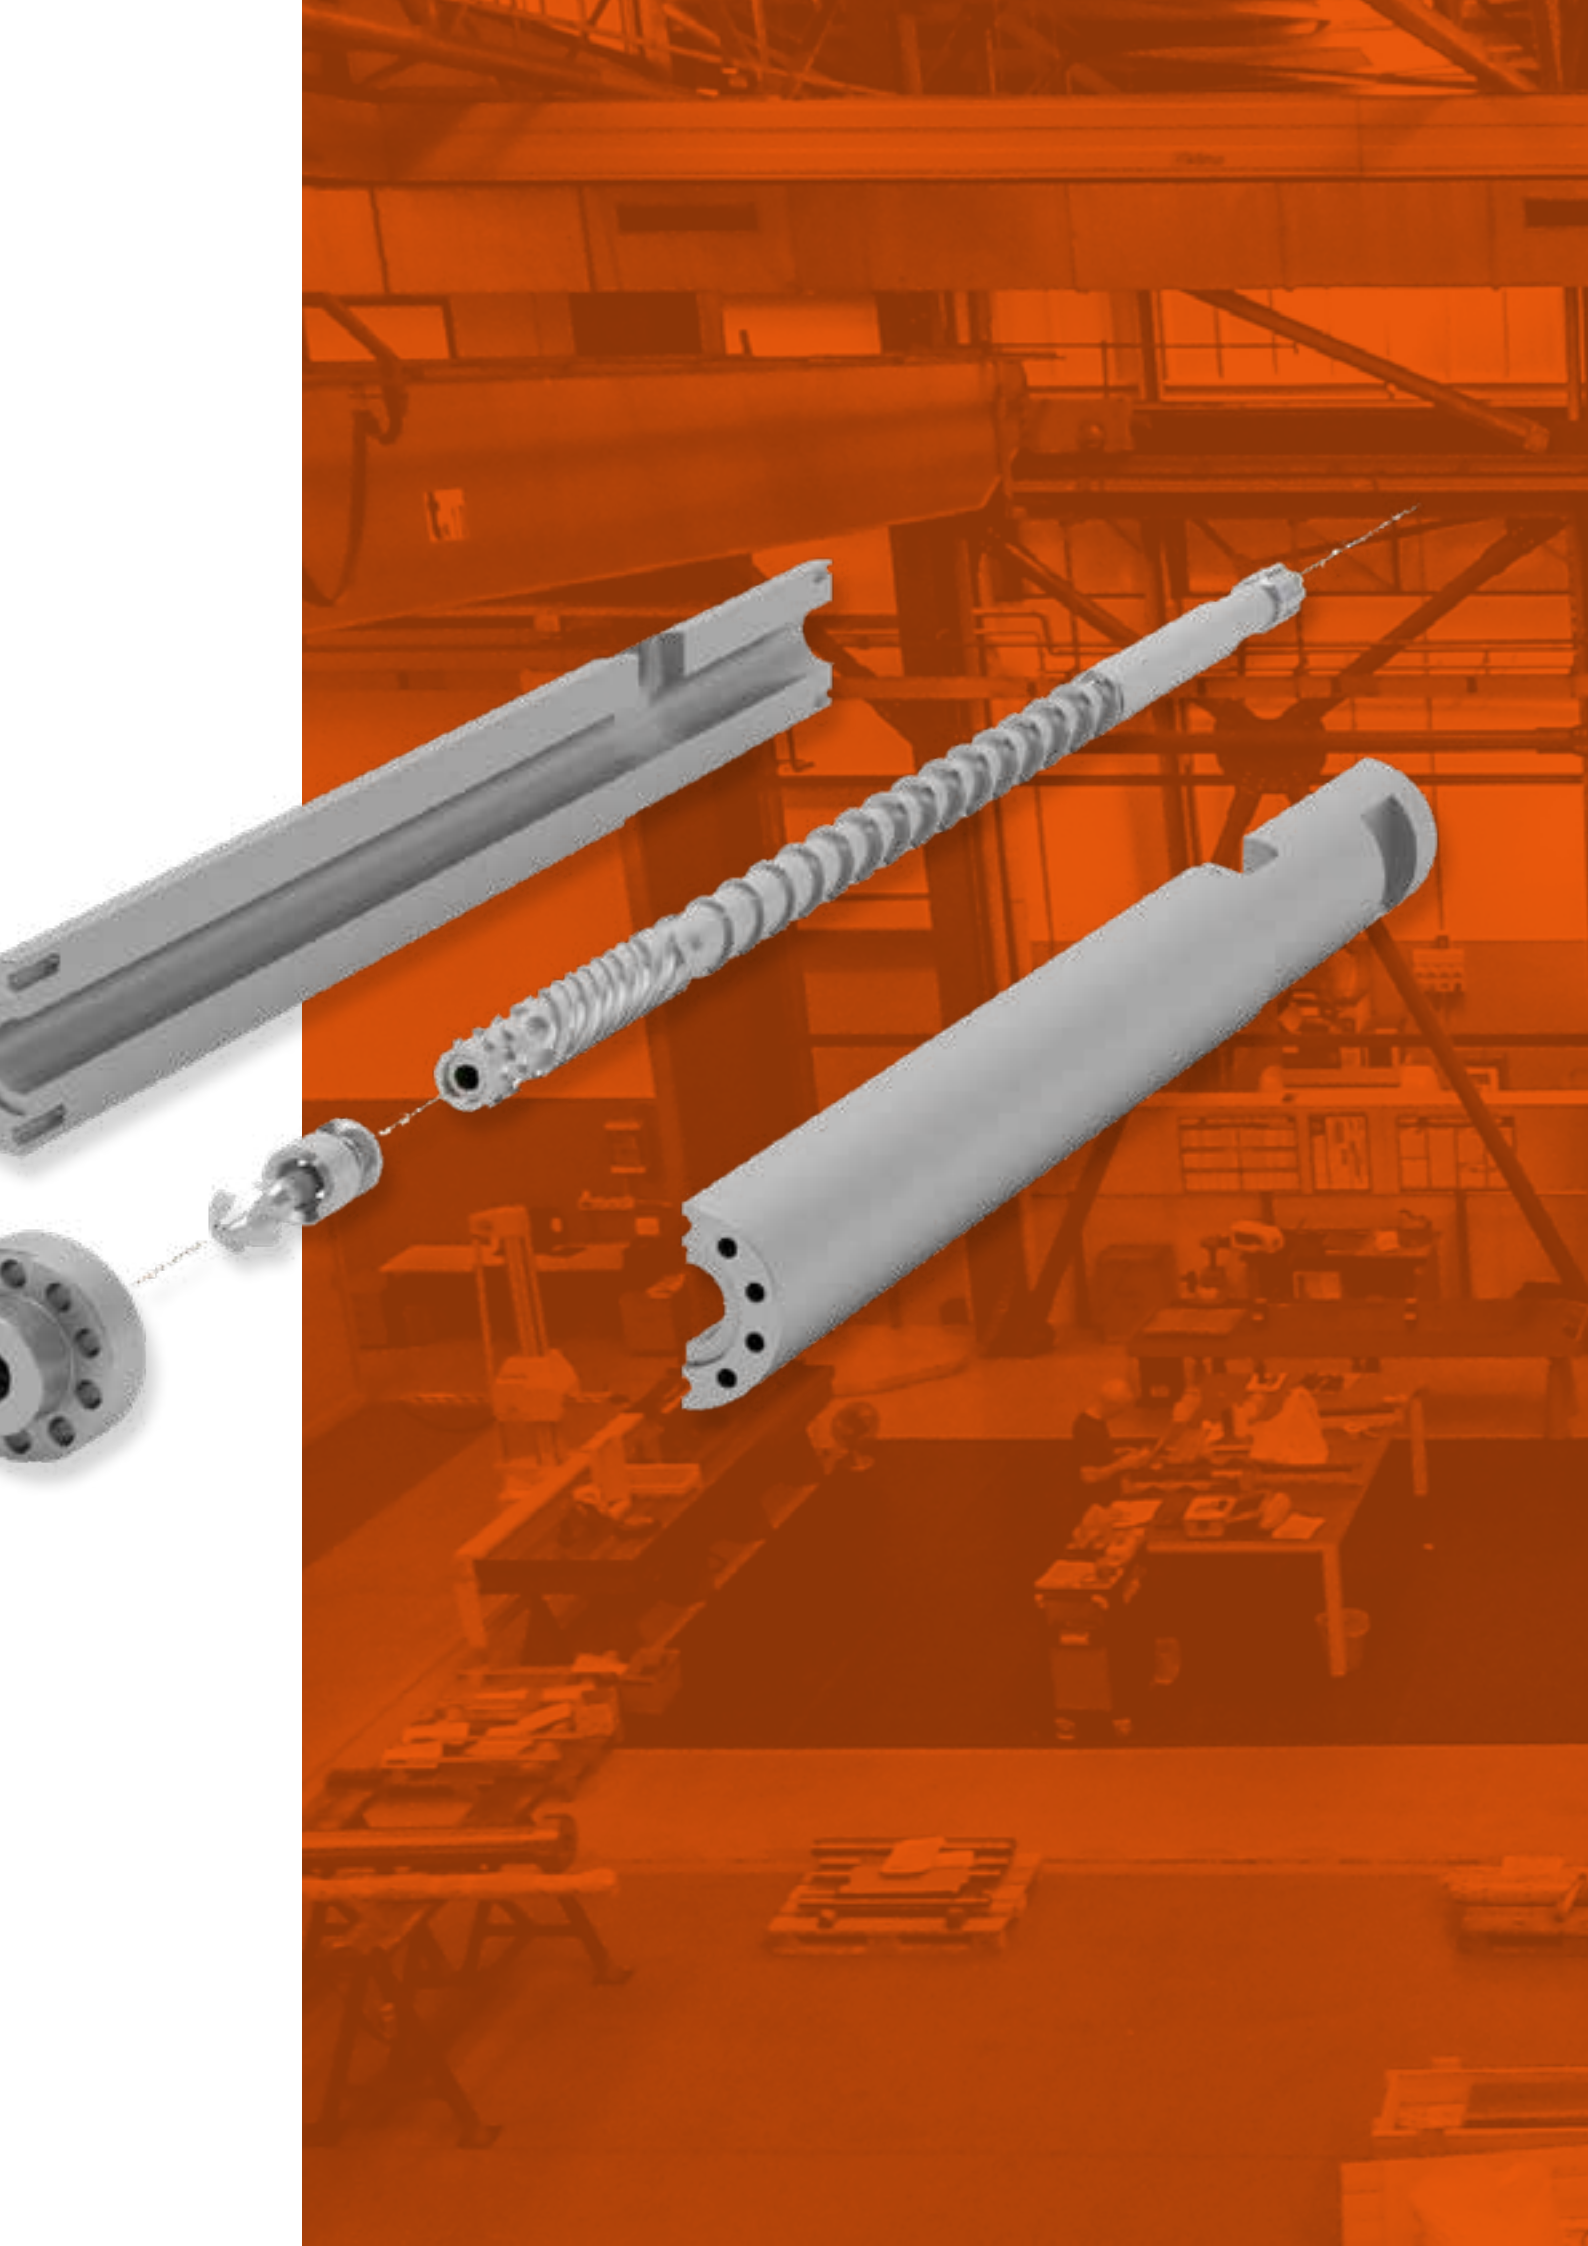

Our ever-expanding structure has achieved this result thanks to the **desire to meet the needs of our customers**, offering unique services and expertise on the national and international markets.

The driving force behind **BRIXIA PLAST** is people.

We believe in the growth and enhancement of personnel, the real strength that makes all our activities grow and improve.

TEAM WORK

VISION AND MISSION

Innovation and implementation of technological solutions, that allow our partners to optimize their production processes and achieve higher quality standards

We produce **high quality products**, responding to the specific needs of each customer, always at a fair price. We research **new technologies** and develop new products, always looking towards a sustainable future.

We become a partner of our customers, guaranteeing **reliability and dedicated assistance services** during and after the sale.

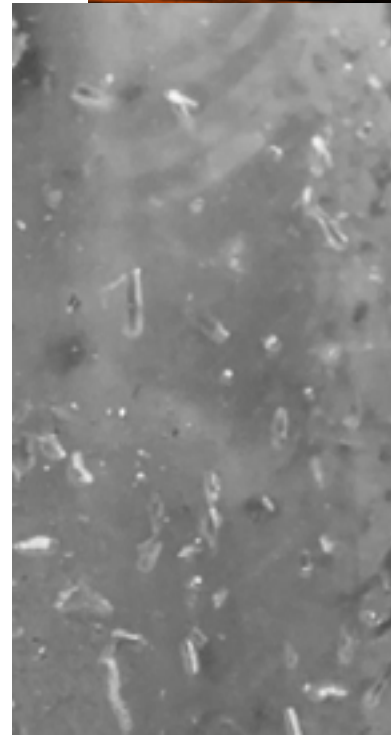

PRODUCTION

BRIXIA PLAST can supply injection units and any spare part from a diameter of 12mm up to a diameter of 320mm, for every injection **moulding machine, extruder or blow molding machine.**

We only use certified European war material and have access to a wide range of different steels, heat treatments and protective coatings.

A modern production and a quality control department allow us to **approach the business as a partner, not just as a supplier!**

WAREHOUSE

We believe that reactivity and **fast-response** are key factors in today's market; for this reason we have a large stock of finished products for the most common European injection machines, as well as semi-finished products and above all a large availability of raw materials.

A GREEN FUTURE

BRIXIA PLAST believes in production's efficiency. For this reason new production procedures have been developed and implemented, in order to increase productivity, reducing scraps and overall costs. We have our eye on saving energy in a considerable amount.

OUR TARGET

We become partner of our clients. We design and develop personalized projects, optimizing different aspects of the production process

OUR SOLUTION

We optimize production times, reducing costs and scraps. Our target is to implement a green process, with a strong energy saving.

TECHNICAL DEPARTMENT

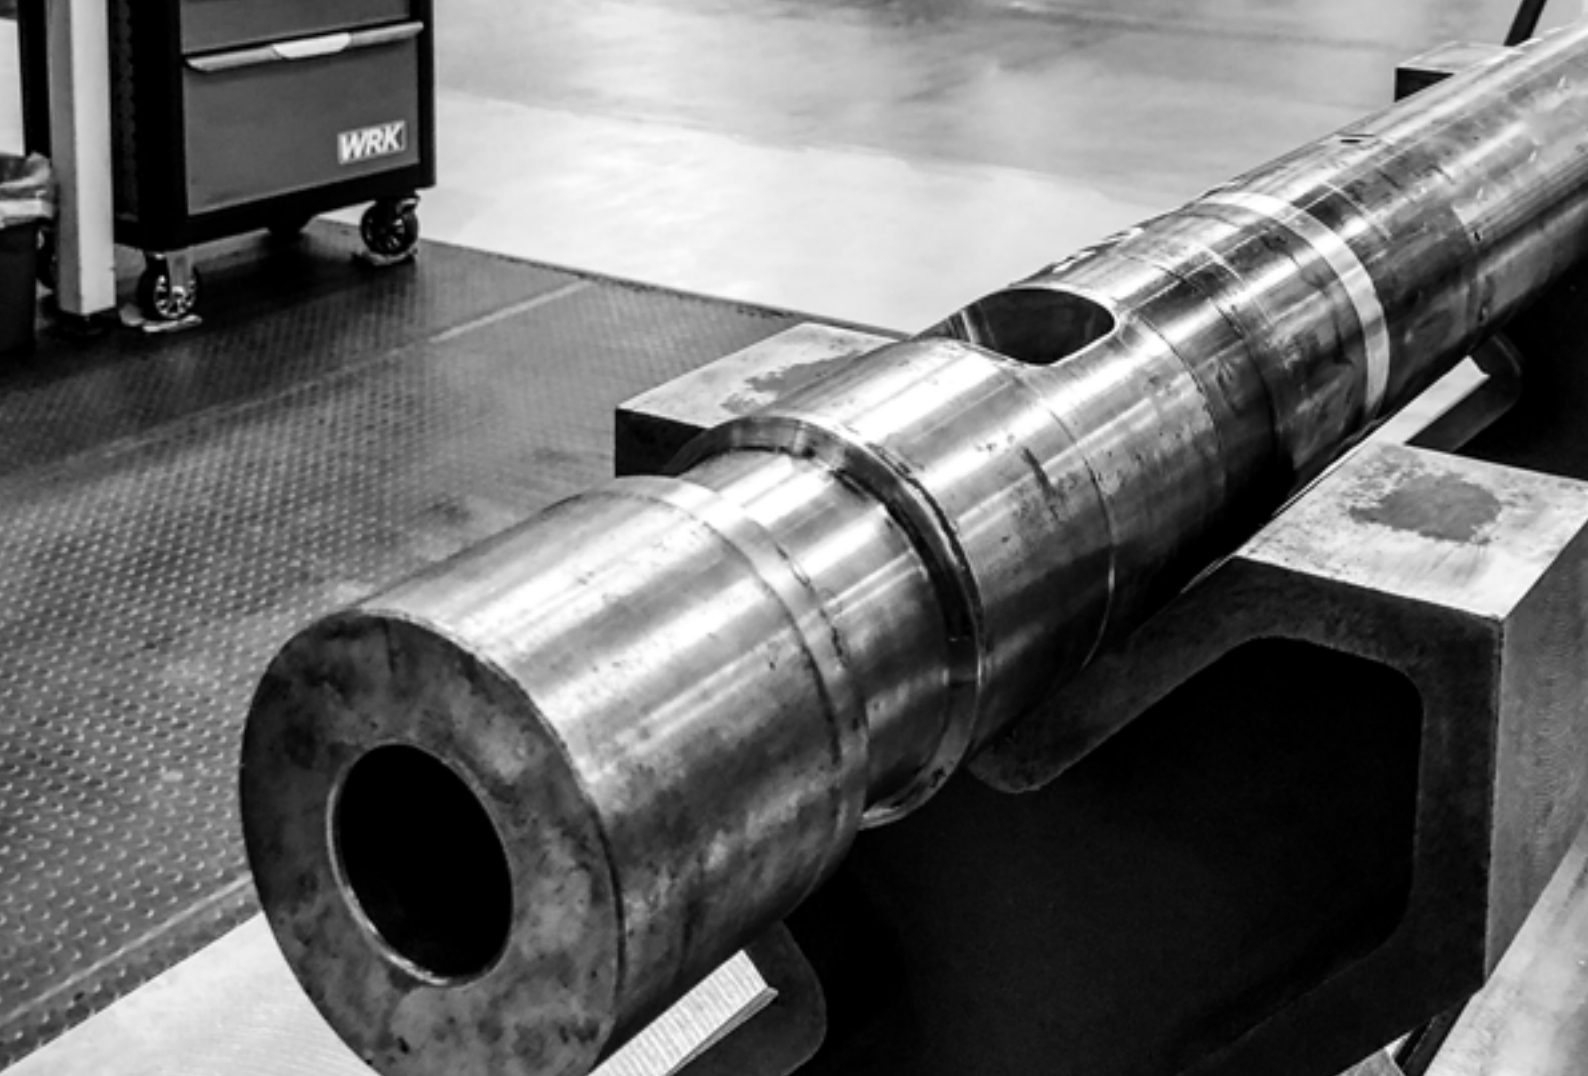

Our technical department is composed of a **team of process technologists** with more than forty years of experience in the plastic industry and **CAD experts** who work closely together to analyze customer requests or problems, to develop tailor-made solutions.

The work carried out with passion and dedication over the years has allowed us to create an ever-growing technical archive which today counts over 30,000 drawings.

Your goals, methodologies and materials are our working parameters for **your satisfaction!**

SERVICE

Our process technologists are always available during and after production.

Our customers can rely on us when in need of disassembling and assembling their plasticizing units, checking up on the wear of the components and their complete refurbishment.

Together with our customers, we proceed with the start-up of the machines and analyze possible problems and process parameters.

The partnership continues even after the supply. To complete and improve the training of our customers, we organize Melting Process courses with technicians and specialists.
